Aviraj Patil

Full-stack developer and B.Tech CSE (AI & ML) student, Pune

avvi.mee@gmail.com +91 90679 23611 linkedin.com/in/avvimee github.com/avvi-mee aviraj-patil.vercel.app

Summary

I build complete products on my own: database, backend, web and mobile apps, AI features and deployment. I have shipped 25+ projects, from a gym app with payments and CI to local AI video pipelines.

Education

B.Tech, Computer Science and Engineering (AI & ML), JSPM, Wagholi, Pune — 2025 to 2029

Projects

Katori, All-in-one gym app for Indian gym-goers — Expo, React Native, TypeScript, Supabase, Deno

- Photo meal logging for Indian food: the AI names dishes and portions, and calories come from a reviewed food table.
- Offline workout logger with one-rep-max estimates, habits, steps, body tracking and a daily score; trainer mode with per-client Razorpay billing.
- Row-level security on every table with database tests; CI applies migrations and deploys edge functions on each push.

VASP Trace, Crypto wallet attribution for cybercrime investigations — Python, FastAPI, Next.js, NetworkX, Postgres

- Follows a wallet up to 12 hops across Ethereum, Polygon, Tron, Solana, Bitcoin and BNB Chain to the exchange most likely holding its KYC.
- Sanctions screening from three sources, five laundering-pattern checks, and a court-format evidence pack.

Sukyoo, App for senior citizens and their families — Expo, Next.js, TypeScript, Supabase

- Senior app with big buttons, adjustable text and a call-for-care button, plus a family app, web app and admin panel in one monorepo.
- 15 database migrations, 6 edge functions and 155 automated tests running in CI.

GramToon Studio, Local AI pipeline for animated Hindi cartoons — Python, Ollama, ComfyUI, n8n, FFmpeg

- Turns an idea into a 1080p episode: story, rigged characters, voices with lip-sync, animation and render, orchestrated by n8n workflows.
- Runs on a 6 GB laptop GPU and renders 74 seconds of video in 72 seconds.

Interior Studio OS, Multi-tenant software for interior design studios — Next.js, TypeScript, Firebase

- Estimate calculator, sales pipeline, contracts with signing, vendors and analytics, with separate data per studio.

Peer Review Arena, Reinforcement learning environment for AI code review — Python, FastAPI, Docker

- Two AI agents review the same code, then learn from each other's findings; live demo on Hugging Face Spaces.

Also built: PODSYU (podcast to YouTube Shorts with speaker tracking and word-synced captions), MedFlow (six-agent blood report analysis) and ARIA (AI banking assistant over chat, voice and SMS).

Skills

Languages	TypeScript, JavaScript, Python, SQL
Frontend and mobile	React, Next.js, Expo / React Native, Tailwind CSS
Backend and data	FastAPI, Node.js, Supabase, PostgreSQL, Firebase
AI and automation	LLM APIs, n8n, Ollama, Whisper, ComfyUI, FFmpeg
Shipping	Git, GitHub Actions, Vercel, Docker, automated testing
